# / Introduction

GD350 is a brand new high-performance VFD which integrates the speed, torque, and position control. It is widely applicable to control over synchronous and asynchronous motors. It is highly extensible and flexible with PG card, PLC card, communication card and IO card, meeting the demands of various industries. It's oriented for mid&high end OEM market, mainly covering printing, packaging, winding, etc.

## Features

- Support SVC and VC(Closed loop) control for both asynchronous and synchronous motors.
- Enable high precision of speed, position, torque control and fast speed response.
- Support Ethernet/IP, Profinet, CAN Master/Slave, etc.
- Accept plug-in of three expansion cards simultaneously (only two cards  $\leq 5.5\text{kW}(10\text{HP})$ ).
- Integrate safety function-STO(Safe Torque OFF, SIL2).
- Unique I/F control and online transition with other control modes are very suitable for the situation where the Asynchronous motor has low speed with high torque and the speed accuracy is not high.
- Multi-function LCD keypad.
- Support optional Bluetooth card and WIFI card.

## / Product Advantage

### Full motion and all-round

#### Performance improvement

Compared with the products of last generation, the performance is significantly improved

##### Motor auto-tuning

- Asynchronous motor--Eliminates the impact of the skin effect, improving the auto-tuning precision.
- Synchronous motor--Performs auto-tuning on the counter-electromotive force, effectively avoids the impact of the initial value of the counter-electromotive force.

##### DC braking

- The current change is smoother in the process of the motor entering DC braking from rotating, the current shock is weak, and the current response is faster.

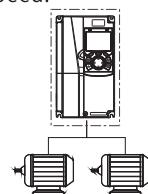

##### Rotating speed tracking

- In any of the control modes, the rotating speed tracking method brings the least current shock, and thus significantly improves the stability.

##### High torque at low speed

- Special I/F control, featuring constant current source, highly applicable to scenarios where multiple motors are to be driven simultaneously and high torque is required at low speed.

State	IO/IN(M)(%)	
	MultipointVF	I/Fcontrol
Before and after brake open in forward running	62.80%	133.40%
Before and after brake open in reverse running	62.50%	130.30%
Before and after brake close in forward running	65.70%	136.10%
Before and after brake close in reverse running	92.00%	136.30%

Data measured on a construction machinery site

### Control performance

- New-type flux linkage observer, improving the stability of the high-speed control.
- New-type speed/current regulator, improving the current control result in quick start and reducing speed overshoot.
- New-type phase-locked loop, improving the stability of high-torque control.
- Compensation for output voltage phases and amplitude, improving the stability of high- and low-speed carriers.
- Adding the synchronous motor VF control mode based on reactive current control. The output current adapts to the load and the oscillation suppression algorithm.

## Drive multiple motors

### Applicable to drive various motors

## Combine different controls

### More precise, stronger torque, speed, and position control over motors

Characteristic indicator	Gooddrive350
Position control precision	±1pulse

(2) Torque and speed control performance—Ensure stable mechanical operation, fast response, and low torque ripple

Characteristic indicator	Gooddrive350
Speed regulation range	1:1000
Speed stabilization precision	+0.02%
Response time in torque control	<10ms
Torque control precision	5%
Start frequency/higher start torque	0Hz/200%

## Keep running when power down

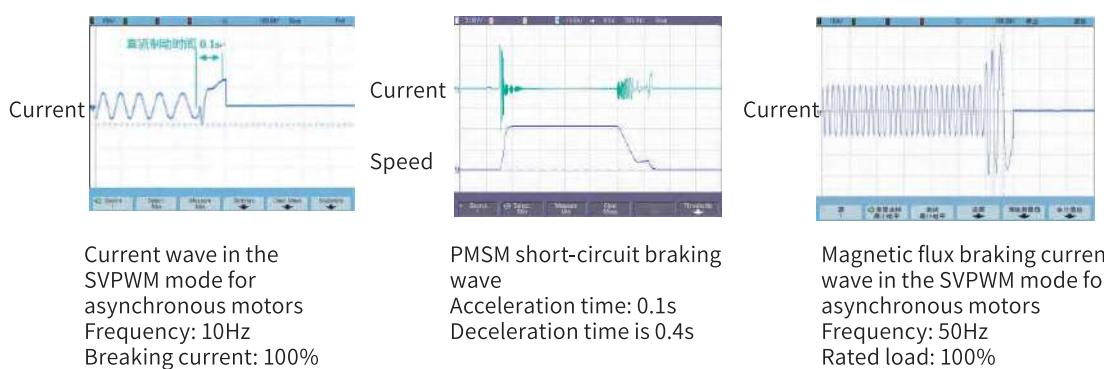

When the grid encounters a momentary power outage, the VFD can keep running by using the fed-back energy within a certain period of time.

It is highly applicable to chemical fiber and textile production lines and other scenarios where the device is Required to run continuously.

## Multiple braking modes to enable fast stop

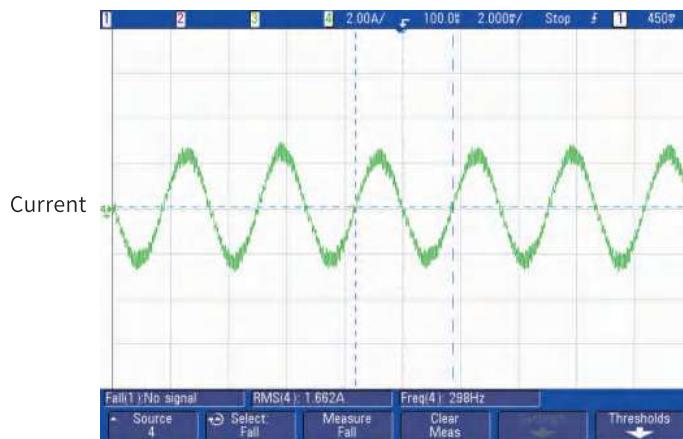

Dynamic braking	DC braking	Magnetic braking	Short-circuit braking
High torque fast speed	No brake unit or brake resistor required	No brake unit or brake resistor required; allowing fast braking	No brake unit or brake resistor required; allowing fast braking
Large-inertia loads scenarios are frequently braked	Applicable to scenarios where freely running motors are to be braked first and then started and where torque output needs to be kept after the motor is braked to run at the speed of zero	Applicable to scenarios where largeinertia loads are to be fast stopped at low frequency	Applicable only to fast stop of PMSMs or braking and then starting freely running PMSMs

Proper voltage and current control, effectively reducing the number of VFD fault protection times

Ovvoltage stall	Ovccurrent stall
Regulates the output frequency during deceleration to prevent the motor from generating too much power due to too fast deceleration	Regulates the output frequency during acceleration to prevent too heavy loads caused due to too fast acceleration

Excellent driving performance on special motors

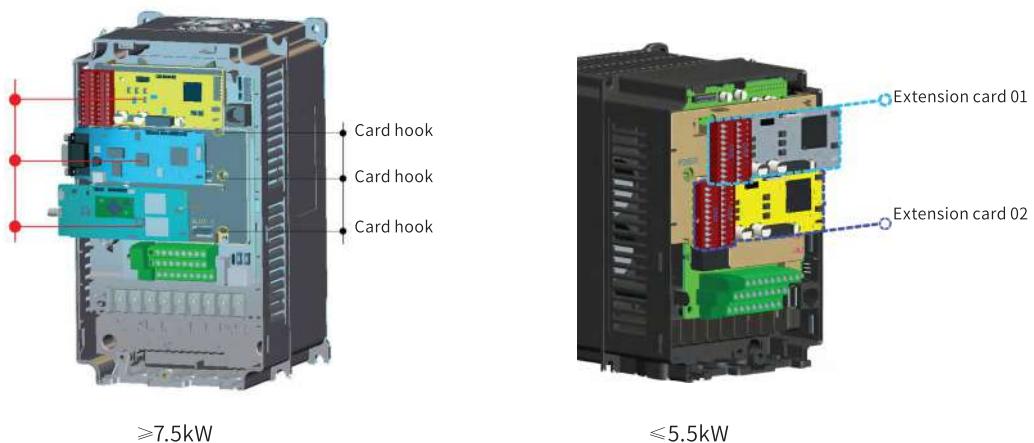

Current wave at 300 Hz with 100% of the rated load in the open-loop vector control mode for synchronous motors

## Multi-function

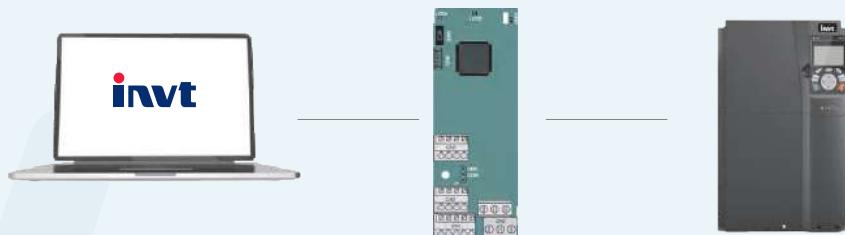

### Enhanced extension performance

- (1) Optional PLC, I/O, communication, and PG cards
- (2) Consistent extension card dimensions

## Supporting customers' secondary development

- (1) Meeting customization requirements, reducing customers' costs, and improving the processes
- (2) Optional PLC card, 128 k program memory space

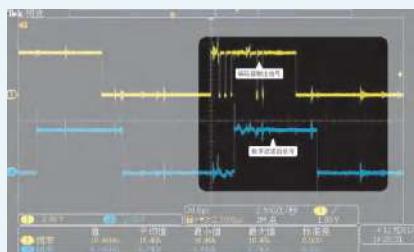

## Supporting various industrial communication protocols

- (1) Standard Modbus communication, supporting the following communication modes based on extension cards

## Adopting the digital filtering technology that improves EMC; the anti-interference performance is twice that of conventional solutions

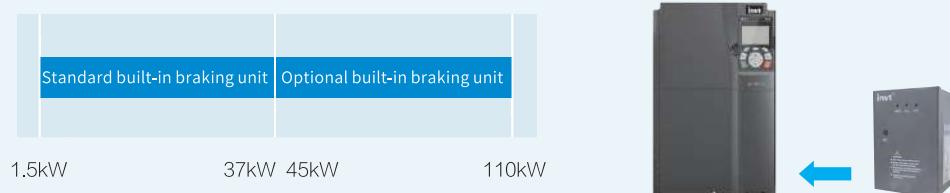

- (1) Supporting pulse reference and frequency-divided output;
- (2) providing the fast encoder disconnection detection function to prevent the expansion of the system fault impact

Encoder signal: near-field coupling of 100m motor wire

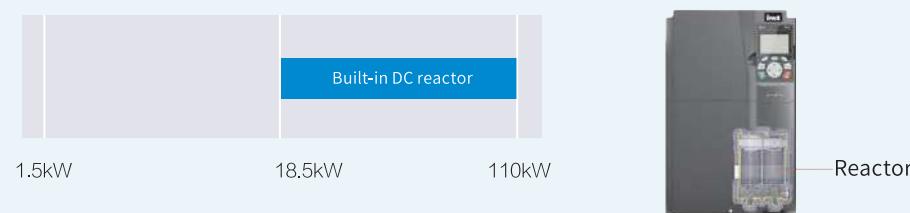

Standard two HDIs that can serve as speed sources or high-speed AB pulse inputs, which can be used for simple closed-loop application

Supporting built-in brake units at a maximum of 110 kW, reducing customers' costs and installation space

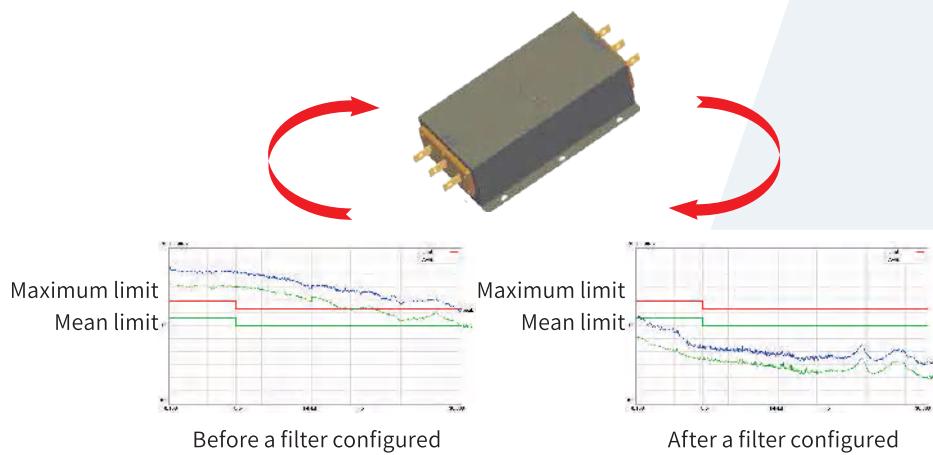

Providing built-in DC reactors for models of 18.5 kW–110 kW

Built-in C3 input filters; optional C2 filters for 380V models

Built-in C3 input filters of 380 V in factory reduce external installation space and prevents electromagnetic interference

#### Test for power terminal conduct disturbance

##### Note:

C2 filters: EMC performance meets civilian environments.

C3 filters: EMC performance meets industrial environments.

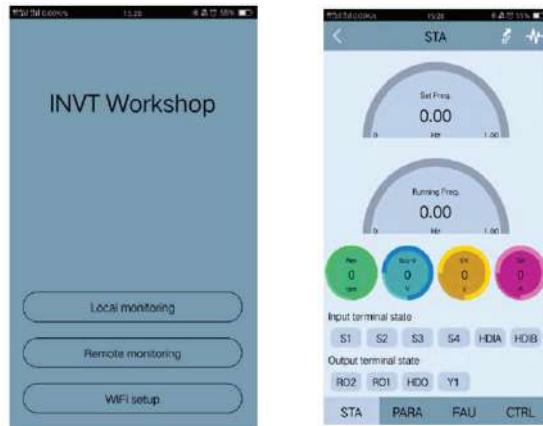

## Abundant external interfaces, meeting the requirements of most application sites

Terminal type	Quantity	Feature
Digital input	4	1. Programmable multi function terminal 2. Max. input frequency: 1 kHz 3. Compatible with both NPN and PNP inputs
High-speed pulse input	2	1. Max. input frequency: 50 kHz 2. Compatible with both NPN and PNP inputs 3. Supporting the input of quadrature encoders, and providing the speed detection function
Analog input	2	0~10V, 0~20mA, -10~10V
Digital output	1	Max. output frequency: 1 kHz
High-speed pulse output	1	Max. output frequency 50kHz
Analog output	2	0~10V, 0~20mA
Relay output	2	3A/AC250V, 1A/DC30V; NO+NC

## Ease of use

### Wireless commissioning

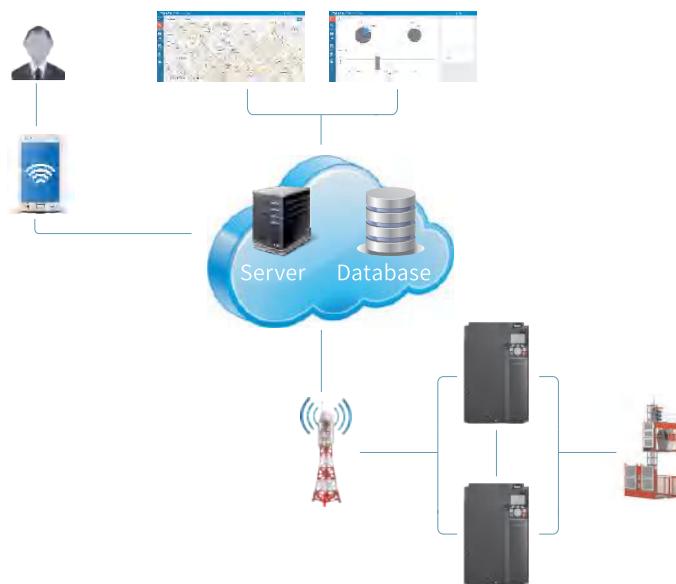

(1) Bluetooth/WIFI connection. You can use the mobile phone application to substitute for the traditional keypad.

---

## Connecting through the Internet of Things (IoT), remote monitoring

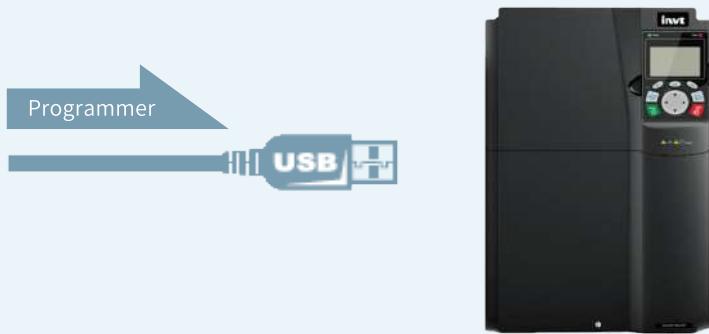

(1) Wireless access. You can easily connect to the IoT, operate the VFD through mobile phone or PC, and obtain the running state of the VFD in real time.

---

## Standard USB interface

USB update

---

Providing the multi-function LCD operating panel, user-friendly design, focusing on user experience

No.	name	No.	name
1	Run	9	Running key
2	Trip	10	Stop/Reset key
3	Quick/Jog	11	Direction key
4	Function key	12	Display screen
5		13	RJ45 interface
6		14	Clock battery cover
7	Shortcut key	15	MiniUSB terminal
8	Confirmation key		

## Safe and reliable

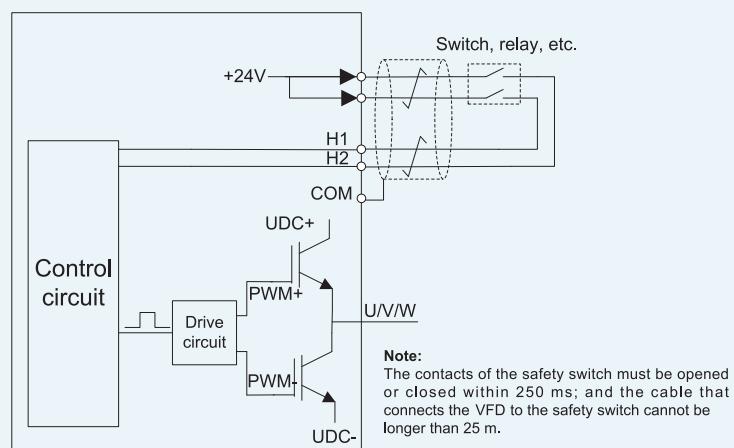

---

Optimal reliability test system, ensuring that the product meets the most complicated application environments

INVT is the first manufacturer in China that has been awarded the Acceptance of Client Testing (ACT) accreditation (data accreditation) issued by TÜV SÜD, which means the technologies, test data, and test reports of INVT's labs are accepted by TÜV SÜD.

## Providing the built-in safe torque off (STO) function, reaching the international level, ensuring more safe and reliable application

- (1) SIL2 level
- (2) Can be used to set up a safety system

## / Application Scenarios

# / Technical Specification

Function description		Specification
Power input	Input voltage (V)	AC 3PH 380V (-15%)-440V (+10%) rated voltage: 380V AC 3PH 520V (-15%)-690V (+10%) rated voltage: 660V
	Input current (A)	Refer to Rated value
	Input frequency (Hz)	50Hz or 60Hz, allowable range: 47–63Hz
Power output	Output voltage (V)	0–input voltage
	Output current (A)	Refer to Rated value
	Output power (kW)	Refer to Rated value
	Output frequency (Hz)	0–400Hz
Technical Control performance	Control mode	SVPWM control, SVC, VC
	Motor type	Asynchronous motor, permanent magnet synchronous motor
	Speed regulation ratio	Asynchronous motor 1: 200 (SVC); Synchronous motor 1: 20 (SVC), 1:1000 (VC)
	Speed control precision	±0.2% (SVC), ±0.02% (VC)
	Speed fluctuation	±0.3% (SVC)
	Torque response	<20ms (SVC), <10ms (VC)
	Torque control precision	10% (SVC), 5% (VC)
	Starting torque	Asynchronous motor: 0.25Hz/150% (SVC) Synchronous motor: 2.5 Hz/150% (SVC) 0Hz/200% (VC)
	Overload capacity	150% of rated current: 1min; 180% of rated current: 10s; 200% of rated current: 1s;
Running control performance	Frequency setup mode	Digital, analog, pulse frequency, multi-step speed Provide over 30 kinds of fault protection functions: overcurrent, overvoltage, undervoltage, over-temperature, phase loss and overload, etc
	Automatic voltage regulation function	Keep the output voltage constant when grid voltage changes.
	Fault protection function	Fault protection function Provide over 30 kinds of fault protection functions: overcurrent, overvoltage, under-voltage, over-temperature, phase loss and overload, etc.
	Speed tracking restart function	Realize impact-free starting of the motor in rotating Note: This function is available for 4kW and above models
Peripheral Interface	Terminal analog input	No more than 20mV
	Terminal digital input resolution	No more than 2ms
	Analog input	2 inputs, AI1: 0–10V/0–20mA; AI2: -10–10V
	Analog output	1 output, AO1: 0–10V /0–20mA
	Digital input	Four regular inputs; Max. frequency: 1kHz; Internal impedance: 3.3kΩ Two high-speed inputs; Max. frequency: 50kHz; supports quadrature encoder input; Speed measurement function
	Digital output	One high-speed pulse output; max. frequency: 50kHz One Y-terminal open collector output
	Relay output	Two programmable relay outputs RO1A NO, RO1B NC, RO1C common port RO2A NO, RO2B NC, RO2C common port Contact capacity: 3A/AC250V, 1A/DC30V
	Extension interface	Three extension interfaces: SLOT1, SLOT2, SLOT3 Expandable PG card, programmable extension card, communication card, I/O card, etc.

Function description		Specification
Others	Installation mode	Support wall -mounting, floor-mounting and flange mounting
	Temperature of running environment	-10~50°C, derating is required if the ambient temperature exceeds 40°C
	Protection level	IP20
	Pollution level	Level 2
	Cooling mode	Air cooling
	Brake unit	Built-in brake unit for 380V 37kW and below models; Optional built-in brake unit for 380V 45kW~110kW(inclusive) models; Optional external brake unit for 660V models;
	EMC filter	380V models fulfill the requirements of IEC61800 -3 C3 Optional external filter should meet the requirements of IEC61800 -3 C2

## / Type Selection

# / Optional Parts

- VFDs of 380V, 37 kW or lower are equipped with built-in brake units, and VFDs of 45 kW to 110 kW can be configured with optional built-in brake units
- VFDs of 380 V, 18.5 kW to 110 kW are equipped with built-in DC reactors
- P1 terminals are equipped only for VFDs of 380 V, 132 kW or higher, which enable the VFDs to be directly connected to external DC reactors
- P1 terminals are equipped for all VFDs of the 660 V series or higher, which enable the VFDs to be directly connected to external DC reactors
- The brake units INVT's DBU series standard brake units. For details, see the DBU operation manual

	GD350-630G-6		GDL-DCL0805-6CU

- Above options are external installation, customer need to specify them when choosing and purchasing.
- Can be flexibly adjusted according to the rated working current value.
- For reactors selection with different material requirements from the above recommended table, please refer to 《Low Voltage VFD GDL Series Filter Option Brochure》.

## Filters

**FLT-P 04 045 L-B**

---

A      B      C      D      E      F

Filter identifier	Field description
A	FLT: Name of the VFD filter series
B	Filter type P: Power input filter L: Output filter
C	Voltage class 04: AC 3PH 380V (-15%)-440V (+10%) 06: AC 3PH 520V (-15%)-690V (+10%)
D	3-digit code indicating the rated current. For example, 015 indicates 15A.
E	Filter performance L: General H: High-performance
F	Filter application environment A: Environment Category I, C1 (EN 61800-3:2004) B: Environment Category I, C2 (EN 61800-3:2004) C: Environment Category II, C3 (EN61800 -3:2004)

## Extension cards

Name	Model	Specifications	Ordering information
IO expansion card 1	EC-IO501-00	Four digital inputs; One digital output; One analog input; One analog output; Two relay outputs: one double-contact output and one single-contact output	11023-00083
IO expansion card 2	EC-IO502-00	Four digital inputs; One PT100; One PT1000; Two relay outputs: single-contact N.O. output	11023-00119
Bluetooth communication card	EC-TX501-1	•Supporting Bluetooth 4.0 •With INVT's mobile phone APP, you can set the parameters and monitor the VFD status through Bluetooth communication.	11023-00088
	EC-TX501-2	•Maximum communication distance in an unobstructed environment: 30 meters •EC-TX501-1 with a built-in antenna, applicable to molded case machines •EC-TX501-2 with an external sucker antenna, applicable to sheet metal machines	11023-00089
Wi-Fi communication card	EC-TX502-1	•Meeting requirements of IEEE802.11b/g/n •Achieving local or remote monitoring through Wi-Fi communication with the mobile INVT Workshop	11023-00101
	EC-TX502-2	•Maximum communication distance in an unobstructed environment: 30 meters •EC-TX502-1 with a built-in antenna, applicable to molded case machines •EC-TX502-2 with an external sucker antenna, applicable to sheet metal machines	11023-00102

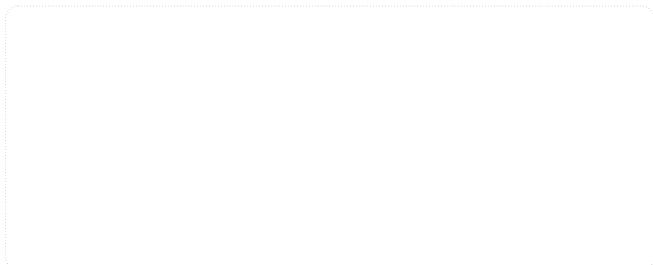

Name	Model	Specifications	Ordering information
PROFIBUS-DP communication card	EC-TX503D	Supporting the PROFIBUS-DP protocol	11023-00151
CAN multi-protocol communication card	EC-TX505D	<ul style="list-style-type: none"> <li>•Based on the CAN2.0A and CAN2.0B physical layer</li> <li>•Supporting the CANopen protocol, selectable through a switch</li> <li>•Supporting INVT master/slave control proprietary protocol, selectable through a switch</li> </ul>	11023-00164
PROFINET communication card	EC-TX509C	Supporting the PROFINET protocol	11023-00149
Ethernet/IP multi-protocol communication card	EC-TX510B	Supporting the Ethernet/IP, Modbus TCP, and internal Ethernet protocols, selectable through a switch	11023-00197
Programmable card	EC-PC502-00	<ul style="list-style-type: none"> <li>•Adopting the global mainstream programmable card development environment, supporting multiple programming languages such as the instruction language, ladder diagram, and sequential function chart</li> <li>•Supporting resumable commissioning and task period execution mode selection</li> <li>•Providing a user program storage space of 16K steps and data storage space of 8K words</li> <li>•Six digital inputs</li> <li>•Two relay outputs</li> <li>•One analog input and one analog output</li> <li>•One RS485 communication channel, allowing master/slave switchover through the host controller</li> <li>•Supporting saving data of 1K words at power down</li> </ul>	11023-00146
Sin/Cos PG card	EC-PG502	<ul style="list-style-type: none"> <li>•Applicable to Sin/Cos encoders with or without CD signals</li> <li>•Supporting the frequency-divided output of A, B, and Z</li> <li>•Supporting input of pulse train reference</li> </ul>	11023-00109
Incremental PG card with UVW	EC-PG503-05	<ul style="list-style-type: none"> <li>•Applicable to differential encoders of 5V</li> <li>•Supporting the orthogonal input of A, B, and Z</li> <li>•Supporting the pulse input of phases U, V, and W</li> <li>•Supporting the frequency-divided output of A, B, and Z</li> <li>•Supporting input of pulse train reference</li> </ul>	11023-00085
Resolver PG card	EC-PG504-00	<ul style="list-style-type: none"> <li>•Applicable to resolver encoders</li> <li>•Supporting frequency-divided output of resolver-simulated A, B, and Z</li> <li>•Supporting input of pulse train reference</li> </ul>	11023-00086
Multi-function incremental PG card	EC-PG505-12	<ul style="list-style-type: none"> <li>•Applicable to OC encoders of 5V or 12V</li> <li>•Applicable to push-pull encoders of 5V or 12V</li> <li>•Applicable to differential encoders of 5V</li> <li>•Supporting the orthogonal input of A, B, and Z</li> <li>•Supporting the frequency-divided output of A, B, and Z</li> <li>•Supporting input of pulse train reference</li> </ul>	11023-00087
24V incremental PG card	EC-PG505-24B	<ul style="list-style-type: none"> <li>•Applicable to OC encoders of 24V</li> <li>•Applicable to push-pull encoders of 24V</li> <li>•Applicable to differential encoders of 24V</li> <li>•Supporting the orthogonal input of A, B, and Z</li> <li>•Supporting the frequency-divided output of A, B, and Z</li> <li>•Supporting input of pulse train reference</li> </ul>	11023-00139
Simplified incremental PG card	EC-PG507-12	<ul style="list-style-type: none"> <li>•Applicable to OC encoders of 5V or 12V</li> <li>•Applicable to push-pull encoders of 5V or 12V</li> <li>•Applicable to differential encoders of 5V</li> </ul>	11023-00115
24V simplified incremental PG card	EC-PG507-24	<ul style="list-style-type: none"> <li>•Applicable to OC encoders of 24V</li> <li>•Applicable to push-pull encoders of 24V</li> <li>•Applicable to differential encoders of 24V</li> </ul>	11023-0012
GPRS expansion card	EC-IC501-2	<ul style="list-style-type: none"> <li>•Supporting IoT monitoring</li> <li>•Supporting remote VFD upgrade</li> </ul>	11023-00130
4G expansion card	EC-IC502-2-CN EC-IC502-2-EU EC-IC502-2-LA	<ul style="list-style-type: none"> <li>•Supporting standard RS485 interface</li> <li>•Supporting 4G communication</li> <li>•CN: Domestic version; EU: European and American version; LA: Latin American version. Note: The 4G SIM card is standard for the domestic version.</li> </ul>	11095-00009 11095-00017 11095-00018
24V power supply expansion card	EC-PS501-24	<ul style="list-style-type: none"> <li>•Input voltage range: DC18~30V(Rated 24VDC)/2A</li> <li>•Three channels of output voltage: +5V/1A (<math>\pm 5\%</math>), +15V/0.2A (<math>\pm 10\%</math>), -15V/0.2A (<math>\pm 10\%</math>)</li> </ul>	11023-00135

Note: Contact us for details about the EtherCAT communication card, relay card, 24V power supply card, GPRS expansion card with anti-vibration and high-precision GPS positioning functions.
